METAL BUILDINGS LLC

Concrete Flush Mount Kit

Choose the slab edge detail with EMB before your concrete contractor sets forms.

FLUSH SLAB

KIT REQUIRED

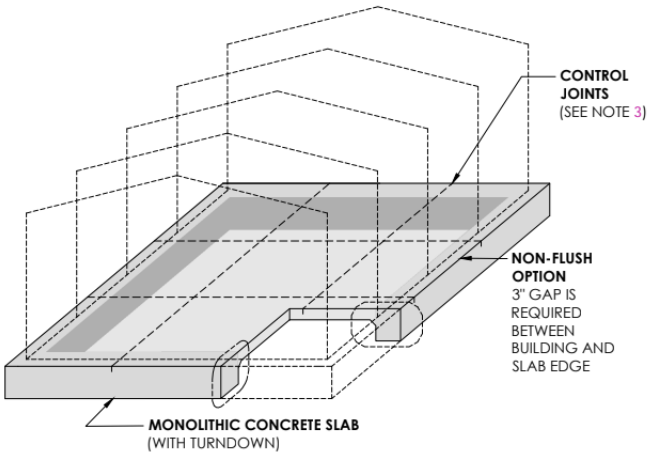

0″ slab projection

The slab edge aligns with the building footprint. Use the flush-mount anchoring detail shown on the approved EMB drawings.

NON-FLUSH SLAB

KIT NOT REQUIRED

3″ slab projection

The slab extends 3″ past the building line wherever the detail calls for it. Use the non-flush anchoring detail on the approved EMB drawings.

Confirm the detail before you pour

Send your slab layout to EMB Engineering & Permitting for review. For an existing slab, send dimensions and edge photos so EMB can confirm the approved mounting detail.

Drawing excerpts are for reference. Follow the approved drawings for your order.
